The Most Natural Looking Turf Infill

THE FUTURE OF TURF INFILL

We add antimicrobial Zinc Omadine® ZOE™ to the vinyl coating.

**ROUNDED SHAPE.
KEEPS TURF LOOKING GREAT.
FAMILY/PET FRIENDLY**

Camofill® is a specialized artificial turf infill different from any others on the market today. It is a multi-colored sand that matches the thatch and hides in the grass. See your grass, not your infill. It's an all-in-one infill option. Camofill® is a non-rubber and long-lasting option that looks less shiny and more realistic. It is an advanced infill created to be the most robust, high quality infill available.

Camofill® is the preferred product when it comes to parks, putting greens, and lawns.

STRONG. SUSTAINABLE. SAFE

COLOR THAT LASTS!

AFTER ACCELERATED UV WEATHER LABORATORY TESTING, THE COLOR OF CAMOFILL® REMAINS VIRTUALLY UNCHANGED.

Camofill®, with its Zinc Omadine® ZOE infused vinyl coating, is non-absorbant and will minimize the associated odors caused by pet urine.

Camofill is free of toxic heavy metals that are potentially harmful to pets and people. Its durable coating is lasting and reusable.

Camofill® is a great choice for synthetic grass in both commercial and residential projects. It is non-toxic and natural.

Our infill is made with the idea of it blending in and looking as natural as possible. It is multi-colored with only earthy tones that you would find in nature. Camofill® will make artificial turf look as real as possible.
