

**ROUNDED SHAPE.
KEEPS TURF LOOKING GREAT.
FAMILY/PET FRIENDLY**

Camofill® is a specialized artificial turf infill different from any others on the market today. It is a multi-colored sand that matches the thatch and hides in the grass. See your grass, not your infill. It's an all-in-one infill option. Camofill® is a non-rubber and long-lasting option that looks less shiny and more realistic. It is an advanced infill created to be the most robust, high quality infill available.

Camofill® is the preferred product when it comes to parks, putting greens, and lawns.

The Most Natural Looking Turf Infill

**THE FUTURE
OF TURF INFILL**

We add antimicrobial Zinc Omadine® ZOE™ to the vinyl coating.

THE FUTURE OF TURF INFILL

Camofill®, with its Zinc Omadine® ZOE infused vinyl coating, is non-absorbant and will minimize the associated odors caused by pet urine.

Camofill® is a great choice for synthetic grass in both commercial and residential projects. It is non-toxic and natural.

Our infill is made with the idea of it blending in and looking as natural as possible. It is multi-colored with only earthy tones that you would find in nature. Camofill® will make artificial turf look as real as possible.

STRONG. SUSTAINABLE. SAFE

COLOR THAT LASTS!

AFTER ACCELERATED UV WEATHER LABORATORY TESTING, THE COLOR OF CAMOFILL® REMAINS VIRTUALLY UNCHANGED.

Camofill® is free of toxic heavy metals that are potentially harmful to pets and people. Its durable coating is lasting and reusable.

Camofill® is well graded to ensure excellent drainage.
